LASIK... What’s it all about?

LASIK (laser in situ keratomileusis) is an outpatient surgical procedure used to treat nearsightedness, farsightedness, and astigmatism. With LASIK an ophthalmologist uses a laser to reshape the cornea in the front of the eye. This improves the way the eye focuses light rays on to the retina at the back of the eye and subsequently improves your vision.

Does LASIK work?
More than ninety percent of those who have LASIK achieve somewhere between 20/20 and 20/40 vision without glasses or contact lenses. In many cases the need for eye glasses and contacts is reduced significantly or eliminated.

Who is a candidate for LASIK?
Generally speaking a large portion of the adult population can benefit with LASIK. It cannot, however, correct all vision impairments. Before the decision can be made you must have an eligibility exam and consultation. The doctor will ask questions about your medical history and give a thorough eye exam designed to determine if the procedure is appropriate for your individual case. The doctor will also talk about the benefits, risks, available options, and preparation and recovery associated with the surgery to ensure that your goals and expectations are realistic.

How is LASIK done?
LASIK is an out-patient surgical procedure usually performed in an ophthalmologists surgery suite. After the eye is numbed with a few drops of topical anesthetic a hinged flap of corneal tissue is created using an automated microsurgical device. The surgeon will then use the laser to sculpt the corneal tissue. Upon completion the corneal flap is placed back into position. No stitches are required.

While some patients report some discomfort or pressure on the eye, pain is not associated with this procedure. It is important to remember that the procedure is surgery and you should know the qualifications of the surgeon as well as the technological status of the equipment being used. Like all surgeries, the patient needs advance knowledge.

See Better, Live Better

Lasik Evaluations are always at no cost. To better serve you, evening and weekend appointments are available. For more information, please visit our website at www.YumaEyeDoctor.com

The Aiello Eye Institute has three locations to serve your needs:
